CONCRETE PLANT WHEEL WASH

Bespoke solutions specifically designed for concrete plants and cement yards.

Not every site can accommodate an off-the-shelf wheel wash solution. For concrete manufacturing and industrial plants with tight footprints or specific operational requirements, Condor works with MobyDick to design and deliver fully bespoke installations.

These custom systems can include flush drive-on/drive-off configurations, in-ground magnetic sensors to trigger washing automatically for outgoing vehicles only, and fully in-ground water recycling tanks to minimise water use and keep the installation low-profile. The result is an automated, space-efficient solution that keeps concrete dust, cement, and debris off public roads, protecting neighbouring properties, meeting environmental requirements, and removing the need for manual wash-down.

DEMUCKING

KEY FEATURES

- ✓ **DRIVE-ON/DRIVE-OFF OPERATION**
  No stopping or reversing required, keeping traffic flowing smoothly.
- ✓ **IN-GROUND MAGNETIC SENSORS**
  Automatically activate the wash cycle for outbound trucks only.
- ✓ **FULL WATER RECYCLING**
  Reduces water usage and supports sustainability goals.
- ✓ **COMPACT FOOTPRINT**
  Ideal for tight or space-constrained sites.
- ✓ **COMPLIANCE SUPPORT**
  Helps meet local environmental and safety regulations.
