DEMUCKING SYSTEMS

The MobyDick Demucking System provides intensive, automatic cleaning for heavily soiled wheeled and tracked vehicles.

The operator stays in the machine throughout the initial wash cycle. Heavy mud and debris are removed at low pressure, followed by a secondary wash for hard-to-reach areas, and a final fresh water rinse.

Every system is individually configured for the fleet it's cleaning. Vehicle dimensions, track or wheel type, daily throughput, and yard or depot layout all factor into the design. It's built around your operation, not the other way around.

KEY FEATURES

- ✓ **AUTOMATIC OPERATION**
  Vehicle drives through, no manual intervention.
- ✓ **LOW-PRESSURE WASHING**
  Effective without damaging vehicles.
- ✓ **HANDLES A RANGE OF VEHICLES**
  Trucks, excavators, tracked machinery, SUVs.
- ✓ **FAST TURNAROUND**
  Heavy mud removed in minutes.
- ✓ **CLOSED-LOOP WATER RECYCLING**
  Water wash flows back into the system.
- ✓ **CONFIGURED FOR YOUR SITE**
  Size and layout to suit vehicle dimensions and site layout.
