ROAD RAMPS

Water transfer across roadways and footpaths.

Condor's Road Ramps provide a safe and efficient solution for transferring pumped water across roads, footpaths, and site access points without disrupting traffic flow or compromising environmental compliance. Engineered for New Zealand's demanding civil construction and infrastructure environments, our road ramps eliminate the need for costly excavation while maintaining safe access for vehicles and pedestrians.

Specs	Description
Full Dimensions (LxW)	4948 x 1808mm
Platform Length	4000mm

APPLICATIONS

Ideal for temporary water transfer during civil construction projects, dewatering operations, and as permanent installations at quarries, landfills, and industrial sites. Road ramps keep your fluid management systems running efficiently while maintaining safe site access and protecting New Zealand's environment from contamination.

KEY FEATURES

- ✓ **HEAVY-DUTY CONSTRUCTION**
  Load-tested to withstand heavy vehicle traffic.
- ✓ **LOW-PROFILE DESIGN**
  Minimal height allows smooth passage for all vehicles with reduced pedestrian trip hazards.
- ✓ **QUICK DEPLOYMENT**
  Integrated lifting points enable fast positioning and relocation.
- ✓ **SECURE INSTALLATION**
  Bolt-down capability keeps ramps in position during high-traffic periods.
